

Metering services

Making sense of a business essential

Business Solutions

powered by e-on

Introduction

Our comprehensive range of metering services is designed to help you **optimise energy use** and **reduce energy costs**. From installation and operation of advanced (AMR) and half-hourly (HH) meters through to powerful energy data analytics, we have everything you need to understand your energy consumption and plot a path to net zero.

Mandatory services, delivered by experts

Every business with an HH meter is required by law to sign up to a set of essential services, governed by Ofgem. While energy suppliers can assign a default provider, every business has the right to choose who it uses as its **Meter Operator (MOP), Data Collector (DC) and Data Aggregator (DA)**.

We're one of the few UK energy suppliers to also provide fully-accredited metering agent services. Our services are available nationwide, even to those using a different energy supplier.

Our MOP services

When you choose us as your meter operator, you'll get fast, fuss-free installation and maintenance services from our nationwide team. With over 25 years of experience in the field, expert engineers on hand when you need them and 60,000 meter points already under our care, we're perfectly equipped to support you with the installation, lease and maintenance of your half-hourly (HH) and advanced (AMR) metering systems.

Our DC/DA services

Using remote communications technology, our energy experts can retrieve and validate your consumption data for each half-hourly period. We pride ourselves on delivering industry-leading data quality, so when you choose us as your DC/DA service provider, you can depend on accurate invoicing and fully-verified energy data.

Did you know...?

By contracting for your meter agent directly, you could lock in cheaper rates for a longer term. Talk to us about how we can help you secure better budget certainty.

Take control, with Intelligent Analytics

As one of our valued DC/DA customers, you can also choose to access our innovative Intelligent Analytics platform.

With energy costs on the rise, understanding how and when you use energy is more important than ever before. Intelligent Analytics puts you back in control, empowering you to make meaningful reductions in cost and consumption.

This powerful **energy monitoring platform** was designed in close collaboration with energy managers and provides easy access to consumption data via intuitive dashboards. Now you can view, download and share day+1 energy data, identify energy savings across your entire portfolio, target problem areas and find new ways to reduce energy related carbon emissions.

Features and benefits

Bespoke Dashboards

Dedicated support

Shareable reports

Site comparisons

Customised alerts

No hidden charges

Use on any device 24/7

How we can help

If you have any questions or concerns about your energy invoices or the charges contained within them, please do get in touch.
